

1. Information button

A) Code snippet:

```
<p id="help_text">Please be constructive</p>
```

B) Current outcome:

You can leave a comment for me as well!

Please be constructive

C) Desired outcome: I was the helpful text to appear after clicking the ? Button.

D) New code:

```
<button id="help">?</button>
```

```
<p id="help_text"></p>
```

```
let help = document.getElementById("help");
if (help){
  help.addEventListener("click", function() {
    document.getElementById("help_text").innerText = "Please be constructive";
  });
}
```

E) New outcome: Now you need to press the ? button to get the message.

You can leave a comment for me as well!

Please be constructive

2. Interesting fact

A) Code snippet:

```
<p>Random fact! : Rudolph the red nosed reindeer...is actually a girl?</p>
```

B) Current outcome:

Random fact! : Rudolph the red nosed reindeer...is actually a girl?

C) Desired outcome: I want the interesting fact to appear as a notification when a button is clicked.

D) New code:

```
<button id="fact">Random Fact!</button>
```

```
//alert
let fact = document.querySelector("#fact");
if (fact){
  fact.addEventListener("click", function(){
    window.alert("Notification: Rudolph the red nosed reindeer...is actually a girl?");
  });
}
```

E) New outcome:
